

Estimation of pack density in grey wolf (*Canis lupus*) by applying spatially explicit capture-recapture models to camera trap data supported by genetic monitoring

by Luca Mattioli, Antonio Canu, Daniela Passilongo, Massimo Scandura, Marco Apollonio

Additional file 4 - Performance of SPACECAP and *secr* models and model selection

a) SPACECAP

Model	Year	Covariates	Detection function	Nr. of parameters	Bayesian p-value
NE_TP	2014	trap-specific effect	exponential	4	0,703
NE_NULL	2014		exponential	3	0,714
HN_TP	2014	trap-specific effect	halfnormal	4	0,766
HN_NULL	2014		halfnormal	3	0,805
HN_TP	2015	trap-specific effect	halfnormal	4	0,591
HN_NULL	2015		halfnormal	3	0,609
NE_TP	2015	trap-specific effect	exponential	4	0,642
NE_NULL	2015		exponential	3	0,676

b) *secr*

Model	Year	Equation	Covariates	Detection function	Nr. of parameters	Log likelihood	AICc	$\Delta$ AICc	$W_i$	Cumul. $W_i$	Evidence ratio
NE_NULL	2014	$D \sim 1 \ g \sim 1 \ \sigma \sim 1$		exponential	3	-386,094	782,187	0,000	0,8735	0,873

NE_TP	2015	$D \sim 1 \ g \sim bk \ \sigma \sim 1$	trap-specific effect	exponential	4	-564,968	1143,650	15,980	0,0002	1,000	2951,297

D=density;  $D \sim 1$  indicates constant density;  $g \sim 1$  is the baseline encounter probability;  $g \sim 1$  indicates the intercept-only (i.e., constant) model;  $g \sim bk$  indicates the local trap response model;  $\sigma$ : spatial scale parameter (determining how rapidly capture probability declines with distance)
