Figure S8. Principal component analysis of 32 predictive functional modules using PICRUSt in level 3 KEGG database. Each vaginal subject is represented by a colored point. (A) Red indicates A+ subjects, and blue indicates A− subjects. (B) The three colors denote the three classes defined by the Nugent score test. Blue indicates N− subjects, orange N* subjects, and pink N+ subjects. The vaginal subjects are separated into two clusters: the first consisting mostly of N− subjects, and the second of N* and N+ subjects. (C) The six colors denote the six groups defined by the two BV tests.
