

Supplementary Figure 1

IGV viewer illustration of 27 nt deletion in the viral transcripts covering the beginning of the region coding for envelope E protein from Kim et al.⁹ The initiating methionine is seen in the top row of the three frame translation.

IGV viewer illustration of 10 nt deletion in the viral transcripts from the Tairaros et al.¹⁰ dataset named “covid_update.fastq” mapped to the wuhan-Hu-1 genome. There are no ORFs affected by this deletion as there are stop codons in all three frames upstream of this deletion.

Supplementary Figure 2
