

Aquatic environment

Terrestrial environment

Terrestrial
coconut crab

Aquatic
decapods

Hypothesis: higher
number of
alternatively spliced
constructs in
studied tissues

Observed:
proliferation of genes
with functions that
overlap with studied
tissues

Observed: lower
number of
alternatively spliced
constructs in
studied tissues

Observed:
proliferation of genes
with functions that
overlap with studied
tissues

Observed: higher
number of
alternatively spliced
constructs in
studied tissues

Observed: less
genes with
functions that
overlap with studied
tissues

N/A
